

What is claimed is:

1. A hose material for a fuel cell system comprising:
 - (A) an ethylene-propylene copolymer;
 - (B) carbon black having a toluene discoloration of 30% to 50%.
2. A hose material as set forth in claim 1, wherein the carbon black has a dibutyl phthalate (DBP) adsorption amount of not less than 50ml/100g.
3. A hose material as set forth in claim 1, wherein the carbon black is present in an amount of 20 to 140 parts by weight based on 100 parts by weight of the ethylene-propylene copolymer.
4. A hose material as set forth in claim 2, wherein the carbon black is present in an amount of 20 to 140 parts by weight based on 100 parts by weight of the ethylene-propylene copolymer.
5. A hose for a fuel cell system formed by using a hose material as set forth in claim 4.
6. A hose for a fuel cell system formed by using a hose material as set forth in claim 1.
7. A hose for a fuel cell system formed by using a hose material as set forth in claim 2.
8. A hose for a fuel cell system formed by using a hose material as set forth in claim 3.
